Investment Policy

The fund is managed with a indexed approach and is distinguished by its broad diversification, minimal tracking error, and cost-effective management. Strategy Indices deliberately deviate from market capitalization in their weighting in order to capture factor premiums or reduce the investment risk. The MSCI World ex Switzerland Minimum Volatility Index is a Strategy Index and seek to capture the performance characteristics of a minimum variance strategy by optimizing a cap weighted MSCI parent index. They have historically shown lower realized volatility and lower beta relative to the MSCI parent index, with a bias towards smaller, less volatile stocks and towards stocks with lower idiosyncratic risks.

The fund follows the exclusion recommendations of the Swiss Association for Responsible Investments (www.svk-asir.ch). The recommendations affect issuers whose conduct or products violate the normative criteria of SVVK-ASIR, e.g. violations of international conventions or production of controversial weapons. This fund is not a sustainable fund and it does not integrate any environmental, social and governance (ESG) considerations into its investment process.

Investing involves risk including the risk of loss of capital. Past performance does not predict future returns. Neither simulated nor historical performance is a reliable indicator for current or future performance.
