

Swisscanto (CH) Index Bond Fund Emerging Markets Hard Currency NTH1 CHF

Bonds | reinvesting | August 2025 - Marketing Material

Fund Description

The fund's objective is to replicate the risk and return characteristics of the benchmark index.

Currency fluctuations between the currency of this share class and the investment currencies of this fund are hedged (portfolio currency hedging)*.

Sustainability Policy

These assets are not managed sustainably. Exclusions in accordance with SVVK-ASIR (Swiss Association for Responsible Investments) are applied.

Profile/Suitability

This product is suitable for investors who

- have at least a medium-term investment horizon.
- wish to benefit from the development of the market for USD government bonds and bonds from state-affiliated companies in emerging markets and wish to benefit from the yield potential of the underlying index.

An excess return compared to the underlying index cannot be expected.

Comments to the Fund

Target Investor Group - Term

Institutional investors with necessary contract

Target Investor Group - Description

N class is offered exclusively to Zürcher Kantonalbank investors with an individual asset management agreement and institutional investors with an individual investments contract, as well as institutional investors of other partners of Swisscanto Fund Management Company Ltd. with the corresponding agreement. An additional requirement is the conclusion of a cooperation agreement. The second letter «T» indicates that the class reinvests profits (accumulating). The designation «H1» in the third position indicates that the class provides for currency hedging (only shown for hedged classes).

Flat Fee (FF)

The AIF is used to compensate the fund management company and fund administration, asset management and - if compensated - the distribution of the fund as well as the custodian bank for the services it provides.

Charging Fee N-Class

The charging fee applied to the N-Classe is shown at a rate of 0%, as the FF is charged in the context of the individual asset management agreement.

Total Expense Ratio (TER)

The Total Expense Ratio (TER) refers to the annual costs that are continuously charged to the fund's assets and is expressed as a percentage of the fund's assets. The figure corresponds to the level of the TER in the most recently completed financial year and does not guarantee a similar level in the future.

Issue and redemption charges in favour of funds ("crossing")

The fact sheet mentions the currently valid and maximum charges incurred. To protect existing investors and cover transaction costs, the fund management credits all issue and redemption charges to the respective sub-fund assets. Issue and redemption charges in favour of the fund are reduced to the extent that issues and redemptions can be offset against each other on a bank working day (known as "crossing"). As a result, charges may be reduced. For further information, see fund agreement.

Swinging single pricing (SSP) indirectly

According to fund master data, this fund does not exhibit any swinging single pricing (SSP). However, it cannot be ruled out that an investment is made in a target fund with SSP indirectly.

License terms of external data providers

Customer acknowledges that the Index is provided "as is" with all faults all warranties and representations of and kind with regard to the Index are disclaimed including any implied warranties of merchantability, quality, accuracy, fitness for a particular purpose and/or against infringement and/or warranties as to any results to be obtained by and/or from the use of the index, there are no representations or warranties which extend beyond the description on the face of this agreement, if any. J.P. Morgan does not guarantee the availability, sequence, timeliness, accuracy or completeness of the Index, J.P. Morgan may discontinue generating the Index at any time without prior notice and, to the fullest extent permitted by applicable law, J.P. Morgan will not be liable (in contract, tort or otherwise) For any ordinary, direct, indirect, consequential, special, punitive or exemplary damages in connection with this agreement and/or any use of the Index even if J.P. Morgan has been apprised of the likelihood of such damages occurring.

Explanation of general risks

Investment involves risks, especially with regard to fluctuations in value and return. Investments in foreign currencies are subject to exchange rate fluctuations. Custody and counterparty risks represent further significant risks. We hereby refer to the detailed description of various risks which are included in the prospectus.

Risk Indicator

The historical data used to calculate the risk and return category cannot be used as a reliable indication of the future risk profile. The reported risk and return category may well be subject to change. The lowest risk category cannot be compared with a risk-free investment. There is no capital guarantee or capital protection. The risk of capital loss is borne by the investor.

Hedging

NAV hedging: Currency fluctuations between the currency of this share class and the fund currency are hedged. The objective of NAV hedging is to transfer the performance in the fund currency to the performance of the currency of this share class. Over or under- hedging may occur due to market fluctuations or due to cost considerations.

Portfolio currency hedging: Currency fluctuations between the currency of this share class and the investment currencies of this fund are hedged. The objective of portfolio currency hedging is to hedge the investment currencies of this fund against the currency of this share class. Over or under- hedging may occur due to market fluctuations or due to cost considerations.

Notes on the Breakdowns

– Minor deviations can be caused by rounding errors.

Breakdown Allocations

Allocation refers to invested fund capital adjusted to 100%. Minor deviations can be caused by rounding errors. The weighting of the money market may include the synthetic exposure from the equity hedging strategy.

Tracking Error

Tracking error describes the volatility of differences in performance between a fund and its benchmark. Tracking error is a measure of the active risk of the portfolio manager. Passively managed funds have a low tracking error.

Volatility

Volatility is a statistical measure of risk which indicates the extent to which the absolute return on an investment or a portfolio fluctuates on average around its mean value in the course of a year.

Sharpe Ratio

The Sharpe ratio is a performance measure which indicates the risk-adjusted excess return (difference between the portfolio return and the risk-free return) compared to the investment risk incurred (volatility).

Modified Duration

The modified duration indicates by how many percent the price of a bond changes if the market interest rate changes by one percentage point.

Time to Maturity in Years

The maturity of a money market instrument or bond is determined based on the earliest possible redemption date. The average maturity of an investment fund is determined by the weighted mean of the maturities of the individual securities from the time of valuation to redemption.

Yield (without currency hedging)

The yield refers to the duration-weighted yield on the portfolio in local currency. No currency hedging is taken into account.

Average Coupon

To calculate the average coupon, the coupons are weighted according to the current outstanding volume of invested bonds.

Greenhouse gas emissions in kg/m²/Year

The greenhouse gas emissions generated by heating and hot water preparation are taken into account. The values are based on a model calculation and data enrichment methods are used. The greenhouse gas emissions of the individual properties are aggregated at portfolio level on a capital-weighted basis. The portfolio's greenhouse gas emissions are calculated by IAZI AG at the end of each year.

Distribution of energy carrier

The energy source mix shows the distribution of the primary energy sources for heating and hot water preparation. The values are based on a model calculation and data enrichment methods are used. The energy sources of the individual properties are aggregated at the portfolio level with equal weighting. The energy source mix is calculated by IAZI AG at the end of each year.

ISO Certification

Asset Management at Zürcher Kantonalbank is ISO 9001 certified. The ISO 9001 certification guarantees that the authorised user has a management system that meets the requirements of a suitable and recognised standard and has been successfully certified/assessed by the Swiss Association for Quality and Management Systems (SQS).

Reporting

- Analyses and data from MSCI Inc. (www.msci.com) were used to compile this report.
